

Installation Instructions

Read carefully before you begin adjustments

L-Brackets – Drawer Front/Door Adjustments

These instructions advise how to adjust drawer front(s) or door(s) that are attached to a drawer body with L-Brackets.

Product Use

The L-brackets, plastic caps and screws are used to attach doors/drawer fronts to a drawer body.

Tools Needed

- Phillips Screwdriver
- Thin Putty Knife
- Safety Glasses

Procedure

BASE CABINETS:

- 1** For all assembly steps, safety glasses are recommended. The doors/dfs are attached to the drawer body with L-brackets, which have been covered with plastic caps (Fig.1).

NOTE: Depending on the size of the drawer body, there may be one or two L-brackets installed on each side.

- 2** Remove the caps using a thin putty knife by carefully prying them up and out. Then loosen the installation screws with the Phillips screwdriver so the door/df can be repositioned. Loosen the brackets on the left and right side of the door/df and drawer body (Fig.2).

- 3** The L-brackets have oval shaped holes so the door/df should be able to slide side to side and up and down. In order to adjust this door/df, it is suggested that two people are available; one person can adjust and hold the door/df in position and the second person can retighten the screws (Fig.3).

- 4** After the door/df is repositioned and all of the screws are tightened, place the plastic cover caps back on the door/df as shown in Figure 1.
